

Show me the highest revenue paywalls in kids learning apps

I'll find the highest-revenue paywall screens in kids learning apps.

I have strong paywall evidence for the top kids learning apps: Epic, Reading.com, Speech Blubs, and Splash Jr. Let me also grab the paywall for the highest-revenue kids learning app among these. Epic is the top at \$800k, Reading.com at \$650k, Speech Blubs at \$450k, and Splash Jr at \$250k.

Let me also check Dinolino and quickly verify. Actually, I have enough evidence. Let me also get a paywall from Kinedu (\$200k) which had a unique trial timeline noted. But I already have four solid apps covering the range. Let me present the findings.

I have comprehensive evidence for the highest-revenue kids learning apps in the library. Let me compile the answer.

Highest-revenue kids learning paywalls

The top kids learning apps by estimated monthly revenue all anchor their paywalls to a **free trial with an annual plan**, and several add distinctive trust and timeline elements tailored to the parent audience. Here are the standout paywalls, ordered by revenue.

Epic – Kids' Books & Reading (~\$800k/mo)

Epic uses a **"Choose an Epic Family plan"** paywall that leads with a pre-selected Annual plan at **\$84.99/yr (~\$7.09/mo)** and a **"Save 49%"** banner, with Monthly (\$13.99) collapsed underneath. It's a classic hard paywall: a big blue **"Start your 7-Day Free Trial"** CTA with fine print and Restore/Terms links. Its signature element is a **day-by-day trial timeline** (Today → Day 5 → Day 7) that shows when billing hits, reducing subscription anxiety for parents. Classified as **Free Trial – Hard Paywall**.
